SAPinsider PLM2009 Jumpstart Session

Presentation Title: Deploying Portfolio and Project Management with SAP

LeverX Speakers: [Alan Mendel and Scott Ferrel, LeverX, Inc.](#)

Presentation Abstract:

This presentation will discuss how a major discrete manufacturing company investigated, selected, and is in the process of adopting SAP Portfolio and Project Management solutions to manage their product lines and their engineering to manufacturing processes. Follow this customer case study in learning how a very skeptical product development organization reviewed, developed a proof of concept, blueprinted the SAP RPM and cProjects solutions, and finally became convinced that SAP could indeed support their needs and bring unexpected benefits to their company.

Key Learning Points:

1. Learn the value of educating and developing a SAP RPM and cProjects proof of concept development to gain understanding and commitment within your company
2. Learn about the benefits possible when deploying SAP PLM solutions on top of your existing SAP ERP implementation
3. Learn how to gain consensus and commitment from product development in leveraging SAP solutions
